ABOUT ME

My name is Aldo Rivas, a Mechanical Engineer by profession, but during the confinement caused by the pandemic, I discovered my passion for software development. Since then, I have been in the world of programming.

I have been fortunate to work with companies that have given me the opportunity to apply my skills in projects based on technologies such as React, JavaScript, and TypeScript. From creating user interfaces to implementing business logic, every line of code written in React has been a step towards my professional growth.

I have been part of exceptional teams. Together, we have faced challenges, shared knowledge and celebrated successes. The synergy of working side by side with passionate colleagues has been fundamental to my development. Through collaboration, I have learned new techniques, explored design patterns, and discovered creative solutions.
